

TEA Custom Claim Set Definitions

This document defines the TEA custom claim sets used in the TSDS Upgrade Project. Within each claim set are the assigned resources and their read, create, update, and delete access.

Group resources are listed with “(Group)” next to the resource name. Group resources are a collection of individual resources, called child resources. For example, the ‘people’ group resource contains three child resources – ‘parent’, ‘staff’, and ‘student’. Read, create, update, and delete access assigned at the group level provides the defined level of access to all the child resources within the group. For some claim sets, a child resource contains additional read, create, update, or delete access not assigned to the group. In those cases, the child resource is listed right justified under the group resource name. The group resources are defined on the ‘Group Resource Definitions’ page at the end of this document.
